SKILLS

Languages

Java · Python · JavaScript TypeScript · HTML · CSS · SQL

Frameworks

React · Next.js · Node.js · REST APIs

Web & Design

WordPress · Webflow · Figma · Responsive Design

AI & Automation

API integrations · Claude workflow automation · AI CRM for Businesses

Business

Client acquisition · sales · scoping · client communication

EDUCATION

B.A. Software Engineering

Florida Gulf Coast University
Minor in Integrated Studies
2026

ATHLETICS

FGCU Baseball

Collegiate student athlete balancing a full course load and a freelance business.

SUMMARY

Built a freelance business from the ground up: finding clients, closing deals, and shipping websites and AI automation tools that solve real problems. I handle everything from the first call to launch and support, with no one managing me. Comfortable across the full stack and good at turning what a business owner actually needs into working software.

EXPERIENCE

Founder & Web Developer, Freelance

2023 to Present

- ▶ Find and close local small business clients, running the full sales process from cold outreach to signed contracts.
- ▶ Build and ship responsive websites from start to finish: scoping, design, development, deployment, and support after launch.
- ▶ Build AI automation tools including intake forms, content workflows, and chatbots that cut repetitive work for clients.
- ▶ Connect web forms to email, CRMs, and third party APIs so small businesses can run more of their operation online.
- ▶ Manage all client communication, scope, and timelines on my own and keep things running long after sites go live.

PROJECTS

Small Business Client Websites

Responsive client sites with custom layouts and CMS handoff so owners can update their own content.

React · Next.js · WordPress

[Developer Portfolio ↗](#)

My personal portfolio showing web and automation work. Built mobile first with clean, accessible markup.

HTML · CSS · JavaScript

AI Automation Workflows

Connected forms, email, and CRMs into automated pipelines. Built chatbots and content tools that cut manual work.

Python · REST APIs · Automation

Coursework Projects

Software projects from FGCU applying data structures, OOP, and database design.

Java · Python · SQL
